Summary

Senior Software Engineer with 5+ years of backend and infrastructure experience leading AWS/EKS migrations, CI/CD modernization, and high-traffic performance optimization across distributed survey platforms.

TECHNICAL SKILLS

Programming Languages: Python, JavaScript, TypeScript, C++, HTML, CSS

Backend & APIs + Frontend: GraphQL, REST APIs, Node.js, NextJS, React, Django

Databases & Caching: PostgreSQL, Redis

Cloud & Infrastructure: AWS (S3, EKS, ECR), Kubernetes, Docker, ArgoCD

CI/CD, Testing, Observability& Tooling: Splunk, SignalFx, Jest, Pytest, Postman, GitHub, GitHub Actions

WORK EXPERIENCE

SurveyMonkey

New York, NY

Senior Software Engineer

January 2026 – Present

- Led the end-to-end migration from a deprecated third-party file upload library to an in-house secure upload service, orchestrating a **72 TB S3 data replication strategy using AWS Batch and Lambda** to maintain bucket parity across concurrent readers and writers, achieving **100% adoption** and establishing the migration playbook for all subsequent teams.
- Reduced survey load times by up to **77% for large surveys** by auditing backend service calls using **Siege, Splunk**, and **SignalFx** to identify and eliminate redundant data fetches, **cutting p50, p75, and p95** response times by a **33%** and reducing load times from **20+ seconds** to under **5 seconds**.

Software Engineer II

January 2023 – January 2026

- Spearheaded my team's **migration to AWS EKS** by auditing live survey traffic and node allocations to right-size pod CPU and memory configurations, provisioning infrastructure via **Terraform** and **implementing canary deployments** to safely roll out changes, contributing to a **30% company-wide reduction in compute costs** through improved autoscaling efficiency.
- Migrated the **CI/CD pipeline from JetBrains TeamCity to GitHub Actions** across 3 services for a team of 7 engineers by redesigning Dockerfiles for optimized builds and **implementing automated workflows for dev builds, private pod provisioning**, Slack build notifications, and GitHub PR creation, **reducing release times by ~30 minutes** and significantly cutting human error in the release process.
- Won company-wide hackathon customer value award by building a conversational **AI survey experience** using an **LLM and a building a custom MCP server** to transform open-ended voice and text responses into structured survey answers, sparking product interest in AI-driven initiatives

Software Engineer I

July 2021 – January 2023

- Collaborated with **product, design, and backend teams** to deliver two new market research question types (Max-Diff and Best-Worst), coordinating on seamless UI, accessibility, response schema design and data persistence to ensure accurate capture of complex preference data, estimated to generate **\$500K–\$750K in Year 1 revenue** and accelerating adoption of the company's premier tier packages.

EDUCATION

Tufts University

Medford, MA

Bachelor of Science in Computer Science | GPA: 3.6

May 2021

- James Schmolze Award for Excellence in Computer Science
